### FPLC optical splitters, GOLD series

#### INTRODUCTION:

Fibrain FPLC optical splitters divide (split) optical power transmitted in the fiber link into a number of output ports. Thanks to capabilities of the planar technology, FPLC splitters offer very large port counts in compact housings. Fibrain FPLC 1x2N splitters are available with output port counts ranging from 1x2 up to 1x64. Fibrain FPLC splitters guarantee very good insertion loss stability in the whole 1260-1650 nm spectral range, as well as excellent thermal stability, being fully qualified to work in the outdoor -40/+85 °C temperature range. An important advantage from the network design point of view (as well as the subsequent ease of operation and maintenance) is an exceptional loss uniformity offered by the FPLC Gold-series splitters. Fibrain FPLC splitters are available in versions without connectors, as well as with any type of optical fiber connectors, including the E2000 connectors.

#### APPLICATIONS:

FTTC/H access optical networks  
HFC and cable networks  
Other optical telecommunication networks

#### FEATURES AND ADVANTAGES:

1260-1650 nm spectra range  
-40/+85 °C temperature working range  
Very low insertion loss  
Very good loss uniformity  
G.657.A2, reduced bending radius fiber  
Available housings: minibox SUS, ABS blackbox  
Output cables: ribbon, 900 µm tube, 2.0 mm cable with customized length  
Available with any fiber connector type
